Laser Cut Rail Valve Cover Installation Notes

#66-200 / #66-201
SB Chevy fabricated aluminum
valve covers with laser cut rails

These laser cut rail valve covers are designed to withstand repeated installations and removals often necessary on race engines. The 5/16" laser cut rail provides an ideal leak free mounting surface while the .100 aluminum fabricated upper keeps the cover ridged and light.

Installation:

When installing a solid rail valve cover a **steel framed gasket is required** to ensure the gasket and valve cover rail stay properly aligned and sealed. Start installation by test fitting the valve covers on you engine. After test fitting we recommend using gasket cement to attach the gaskets firmly to the valve cover rails. With the gaskets firmly in place evenly mount each valve cover to the heads. Take care not to over tighten.
