#80-282
SUBARU COOLANT HEADER TANK

- 1) First make sure the engine and coolant are at a safe temperature.
- 2) Next drain the coolant tank, siphoning out as much as possible.
- 3) Retain the fluid as you can re-use it.
- 4) Unbolt the stock tank and remove the hoses.
- 5) Install the new tank in the reverse of removal.
- 6) Refill with drained coolant leaving room for the coolant to expand.
- 7) Install the cap from your stock tank and your finished.

**Head over to our youtube page
(www.youtube.com/cantonracingproducts)
to see our step by step install video.**

**WARNING! DO NOT PLUG
OR REMOVE THIS FITTING**

**If this vent is removed the
radiator cap will not be able
to release any excess pressure.**

IT MAY ALSO VOID ANY WARRANTY.
